

Weigh time critical and immobile patients instantly, accurately

- The Patient Transfer Scale is a transfer board with an in-built weighing scale. It provides a weight reading whilst transferring a patient from trolley to bed or bed to bed
- A more dignified way of weighing, reducing stress for patients
- It's part of an existing, embedded process: quick and easy, saving time
- Provides an accurate weight when it's critical for safe medication management and monitoring of patients

Introducing the Patient Transfer Scale

MARSDEN

UK PATENT
Patent number 2543835

US PATENT PENDING

EU PATENT PENDING

HONG KONG PATENT PENDING

The Patient Transfer Scale:

A revolutionary solution for weighing time critical or immobile patients quickly

Key Features

93/42/EEC Medical Devices Directive Approved
2014/31/EU Non-Automatic Weighing Instrument Directive
Class III Approved
Large weight display
Portable
Wipe clean surface
Hold-of-weight feature

Specifications

Capacity: 250kg
Graduations: 500g
Power: Internal rechargeable battery
Battery life: 50 hours
Weight: 11kg
Dimensions: 1800mm x 700mm x 30mm
Product code: M-999

- The idea of the Patient Transfer Scale (PTS) was born of frustration: An NHS Lanarkshire nurse working in Emergency Care was determined to find an easier way to weigh immobile patients
- Healthcare professionals have a duty of care to ensure a safe environment for patients, whilst maintaining their dignity. The PTS provides clinicians with confidence, providing an instant, accurate weight
- The Patient Transfer Scale means you no longer need to estimate the weight of a patient
- A patient's weight can be critical to delivering the right care and treatment at the right time
- Tested in over 30 hospitals, the PTS' final design is based on feedback from healthcare professionals
- The PTS is lightweight and portable and can be taken to exactly where your patient is
