

Weigh time critical and immobile patients instantly, accurately

- The Patient Transfer Scale is a transfer board with an in-built weighing scale. It provides a weight reading whilst transferring a patient from trolley to bed or bed to bed
- A more dignified way of weighing, reducing stress for patients
- It's part of an existing, embedded process: quick and easy, saving time
- Provides an accurate weight when it's critical for safe medication management and monitoring of patients

CANADA PATENT PENDING

HONG KONG PATENT PENDING

The Patient Transfer Scale:

A revolutionary solution for weighing time critical or immobile patients quickly

Key Features

- 93/42/EEC Medical Devices Directive Approved
- 2014/31/EU Non-Automatic Weighing Instrument Directive
- Class III Approved
- Large weight display
- Portable
- Wipe clean surface
- Hold-of-weight feature

Specifications

- Capacity: 250kg
- Graduations: 500g
- Power: Internal rechargeable battery
- Battery life: 50 hours
- Weight: 11kg
- Dimensions: 1800mm x 700mm x 30mm
- Product code: M-999

- The idea of the Patient Transfer Scale (PTS) was born of frustration: An NHS Lanarkshire nurse working in Emergency Care was determined to find an easier way to weigh immobile patients
- The Patient Transfer Scale means you no longer need to estimate the weight of a patient
- Following an initial testing period at 30 NHS hospitals, the PTS is now implemented and embedded in over 65% of NHS Trusts

- Healthcare professionals have a duty of care to ensure a safe environment for patients, whilst maintaining their dignity. The PTS provides clinicians with confidence, providing an instant, accurate weight
- A patient's weight can be critical to delivering the right care and treatment at the right time
- The PTS is lightweight and portable and can be taken to exactly where your patient is
